ABOUT
EDWARD

Edward Roske is a **data scientist who's spent twenty-five years inside the Office of the CFO**. He founded interRel Consulting at twenty-two, ran it for two and a half decades as one of the longest-standing Oracle Platinum EPM Partners, and in 2020 merged it into Argano, a billion-dollar global consulting firm. He's now building Caprus, an AI software company shipping production MCP servers for enterprise finance.

He's the author of ten books in the *Look Smarter Than You Are* series, host of the *Asking Good Questions* podcast, president of the Puerto Rico AI Community (850+ executives), and co-chair of the 2026 Caribbean AI Summit. He holds an MS in Data Science from SMU (perfect 4.0, Outstanding Graduate) and was the first person to score perfectly on the Oracle Essbase Certification exam (a fact he brings up more than he should).

Answers to the Questions You've Been Quietly Asking Yourself About AI	Business Leaders Guide to AI	Building a Company in the Era of AI
For executive audiences who are tired of generic AI predictions and want frameworks for the questions they're already wrestling with privately. Works as a keynote, a fireside chat, or the opening session of an executive offsite.	What executives actually need to know about AI to make good decisions, from a data scientist who builds the systems rather than just commenting on them. Model selection, evaluation, vendor pitches, and the difference between an AI feature and an AI strategy.	For founders and operators. How the calculus of building a company changes when AI is rewriting the underlying business model. Drawn from twenty-five years running interRel and the live build of Caprus.
